PROFESSIONAL SUMMARY

Lead Data / Software Engineer with a strong business mindset, specializing in data-intensive and high-load systems, including big data platforms and real-time solutions. I don't see my role as "closing Jira tickets." My primary goal is to understand the business problem behind the task, translate it into a scalable technical solution, and help the business grow through data, architecture, and well-designed processes. I have extensive experience working with large volumes of data (terabytes), distributed systems, cloud platforms, and complex integrations, but my focus goes beyond code. I actively shape engineering processes, team collaboration models, and technical standards that allow teams to deliver predictable, high-quality results. As a Team Lead, I build well-coordinated, friendly, and professional teams, where engineers feel ownership, trust each other, and work as a single unit rather than isolated contributors. As a Tech Lead, I focus on architecture, documentation, best practices, and standardization, ensuring solutions are maintainable, scalable, and understandable for the entire team — not just their original authors. I believe that strong collaboration between business and engineering, clear communication, and shared standards are as important as technical excellence. My interest is Data Science

EXPERIENCE

Sep 2023 – Present

Lead Software Engineer

Portside - Not specified

- Lead the design and development of a real-time, data-intensive ticketing platform supporting 300+ agents and 5M+ tasks.
- Own system architecture, technical decisions, and integration strategy across multiple third-party systems.
- Build and maintain engineering standards, development processes, and best practices.
- Coordinate and mentor the team, fostering collaboration, shared ownership, and professional growth.
- Translate business requirements into scalable technical solutions.

Feb 2021 – Sep 2023

Lead Software Engineer

Portside - Not specified

- Designed and implemented from scratch a data-driven scheduling and optimization system for aircraft and crew utilization.
- Owned system design, data modeling, and optimization logic.
- Led a small engineering team, aligning technical delivery with business objectives.
- Established development workflows, documentation, and technical guidelines.
- Worked closely with stakeholders to refine problem definitions and solution scope.

Apr 2020 – Feb 2021

Senior Python Engineer

Portside - Not specified

- Developed and maintained backend services and REST APIs for data-centric web applications.
- Integrated multiple third-party data sources with a focus on reliability and performance.
- Collaborated with product and frontend teams to deliver business-aligned solutions.

Apr 2019 – Apr 2020

Java Software Engineer

Totango - Not specified

- Responsible for system integration with third-party data sources (Salesforce, Dynamics 365, SAP, HubSpot, Zoho, Redshift, BigTable, and various other CRMs and Databases).

Jun 2018 – Apr 2019

Senior Python Data Engineer

Totango - Not specified

- My primary responsibility was manipulating data (more than 2.5 TB) for research purposes (for training artificial intelligent systems).

- Languages: Python

- Tools&Frameworks: PySpark, AWS S3, ElasticSearch, AWS/Azure (Queues/Storages), MySQL, GCP (Storage/BigQuery), GitHub

- Big data, warehouse.

May 2017 – May 2018

Senior Python Back-End developer

Rep'nUp - Not specified

- Python Back-End software developer. My responsibility is to create back-end ecosystem for cooperation between different parts of our product: Front-End, Storages, Artificial intelligence and integration with social networks.

- Languages: Python

- Tools&Frameworks: asyncio, AWS/Azure (Queues/Storages), MySQL, GitLab, Kibana

Aug 2016 – May 2017

Senior Python Software engineer

EPAM Systems - Ukraine

- Back-end + front-end development using Python+JS(Backbone). Also I'm involved into building Cordova based online/offline mobile application for iOS devices.

Jan 2014 – Aug 2016

Senior Python Software engineer

EPAM Systems - Not specified

- My responsibility is to develop cluster monitoring system. I'm working as back-end, front-end and system engineer. Our product is iso file with Centos + think client + web client for monitoring clusters. I take parts in all parts of project: building iso, configuring environment, auto installing components, fixing think client, developing web client, creating patches.

- Tags: Centos, Cluster monitoring, Tornado, RabbitMQ, Redis, PostgreSQL, MySQL, JQuery, Backbone, Bootstrap, GPFS

Dec 2012 – Feb 2014

Python Software engineer

EPAM Systems - Not specified

- My current responsibility is development of new high-load web-site for world-famous news company. I'm working as back-end developer (server site) on product which have to process a lot of data in real-time.

Apr 2012 – Dec 2012

Python software engineer

SoftServe - Not specified

- My main responsibility was to supporting existing products and creation small extensions and features. Here I can add that products which I was worked on was very height loaded and they had to process a lot of file data.

Nov 2010 – Apr 2012

Python Software engineer

SoftServe - Not specified

- Development of WebUI tool for maintenance automation testing conception.

Jun 2009 – Nov 2010

Python (Automation engineer)

SoftServe - Not specified

- Was involved for creation automation frameworks. Development of ssh library (high level API) for executing one command on a several hosts.

Jan 2007 – Dec 2008

Assistant

NU "LP" - Not specified

- Software engineer.

EDUCATION

Sep 2004 - Dec 2009

Master

Graduated with top honors from Lviv Polytechnic National University, specializing in Information Security and Restricted-Access Systems.

Sep 2009 - May 2010

Software engineer

SKILLS

	System Design & Data Architecture	Data Engineering & Big Data Systems
	Mathematical Modeling	Business-Driven Solution Design
	Technical Leadership & Team Coordination	Distributed Systems & High-Load Architectures
	Process Building, Standards & Best Practices	

LANGUAGES

Russian	Native	Spanish	B1 - Intermediate
Ukrainian	Native	English	B2 - Upper intermediate
